

EPLAN

efficient engineering.

6 Reasons to Switch to EPLAN

Improving your engineering process starts with Eplan

As technology advances at a rapid pace, it has become increasingly evident that previous versions of CAD programs were intended mainly for draftsmen and mechanical engineers. As a result, many businesses involved in electrical design are now seeking alternative solutions that offer a more appropriate and sophisticated platform to help them achieve their goals and objectives. Eplan solutions help engineers automate their workflow and improve efficiency. It is an ideal solution for engineers looking to work faster, smarter, and more effectively.

FRIEDHELM LOH GROUP

Why Eplan is the BEST Solution for Engineers

1

With Eplan's software, you save valuable time through auto-connecting features that allow instant connection of circuit symbols, automated report generation for terminal and wire diagrams, and functions like "Search and Replace" and in Excel that enable mass data editing. This ensures that you can complete your projects on time, without sacrificing your work-life balance.

2

Our suite of solutions enable easy sharing of circuit diagrams, schematics, and bills of materials with all downstream process steps. Ensuring that everyone has access to necessary information from a single source of truth, reducing the number of queries and project changes.

3

Eplan Data Portal provides direct online access to high-quality and accurate component catalog from prestigious component manufacturers. This eliminates the need for SMEs and machine builders to spend up to 15 hours per month creating parts data.

4

You always remain at the cutting edge of technology - now and in the future. A continuous focus on research and development ensures that Eplan drives the digital transformation in electrical engineering. Its platform evolves with technology and stays ahead of other CAD software to put electrical engineers at the forefront of every development decision.

5

Eplan software makes it easy to select and work with global electrical and mechatronic standards such as IEC, NFPA, and JIC, thanks to its built-in formats, templates, and rules. This eliminates the need to create everything from scratch, allowing you to set up your documentation to meet global standards.

6

Cloud-based applications in Eplan enable you to connect with software solutions from every engineering discipline, collaborate with all project stakeholders, and create a standardized database that is automated throughout the engineering process. This ensures that digital data flows seamlessly from one solution to another and is further enriched at every step, making your work more efficient.
